Acoustic Dampener Placement

Installation Guide

1. Suggested Placement
2. Fixed Dampener

Remove the headphone pad from the headphone cup. Place your preferred acoustic dampener onto the area of headphone cup where the cutout will align. Return the headphone pad to the headphone cup clicking the cup into place via the alignment pins and magnetic connection. Enjoy the updated tuning.

The lower number value of the acoustic dampener the higher the level of mid and low frequency response will be. All included values have acoustic merit and are worth your time to experiment with to find the right sound for you.
HD7
PORE SIZE = 7µm

HD10
PORE SIZE = 10µm

HD12
PORE SIZE = 12µm

HD15
PORE SIZE = 15µm
