Use Instructions

We designed your new earphones to bring you years of musical enjoyment wherever you are. Below are a few guidelines that will help you get the most from your experience with them.

Your earphones come with a removable cable that attaches via custom-made beryllium copper MMCX connectors. These increase the life of the connection and extend the usable life of the earphone. It also gives you the ability to select the perfect cable for each situation.

To remove your earphone’s cable:
1. Holding your earphone, pull the cable in the direction parallel to the connection, holding it close to the connector.
2. Avoid pulling the cable at an angle; this can damage the cable and earphones’ MMCX connectors.
3. Don’t worry if this takes a bit of force to remove; we designed it for a secure connection to give you peace of mind.

Care Instructions

To maintain the performance of the earphone to keep the openings clear of debris and wax. Use the clearing tool included with your earphones to remove any build-up that may occur.

Each Campfire Audio earphone holds a sensitive transducer. We have designed and built them to withstand a working performer’s demands. But do note sudden shocks or impact to the shell can cause damage or alter the earphone’s transducer’s performance.

Do your best to avoid excess moisture build-up on the surface and in the earphone body’s interior. Give the earphones time to air dry after listening sessions in humid conditions to preserve their superior performance.

Note that extended listening periods at high listening levels can negatively impact your hearing over time. Please enjoy your earphones responsibly and be good to your ears.
